Starting and Staying on ERLEADA®

A GUIDE FOR HEALTHCARE PROVIDERS AND PATIENT CARE TEAMS

INDICATIONS

ERLEADA® (apalutamide) is an androgen receptor inhibitor indicated for the treatment of patients with:

- Metastatic castration-sensitive prostate cancer (mCSPC)
- Non-metastatic castration-resistant prostate cancer (nmCRPC)

Please see Important Safety Information on page 15 and full Prescribing Information for ERLEADA®.

Johnson&Johnson

Help Your Patients
START AND STAY ON THERAPY

Once you have made the clinical decision to prescribe ERLEADA®, Johnson & Johnson has resources to help you support your patients.

J&J withMe is your single source for access, affordability, and treatment support programs from Johnson & Johnson. Your patients will be connected to ERLEADA withMe.

- Access Support—to help navigate payer processes.
- Affordability Resources—to help patients discover ways to afford their ERLEADA® medicine.
- Personalized, free 1-on-1 Care Navigator Support for Your Patients—offered through ERLEADA withMe to support the nonclinical needs that may arise while on ERLEADA®

TABLE OF CONTENTS

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

Information about your patient's insurance coverage, cost support options, and treatment support is given by service providers for J&J withMe. The information you get does not require you or your patient to use any Johnson & Johnson product. Because the information we give you comes from outside sources, J&J withMe cannot promise the information will be complete.

Four Key Steps to HELP PATIENTS ACCESS MEDICATION

After the clinical decision has been made to prescribe ERLEADA®, the next step is to help your patients access their medication. Once you understand the overall process, it can be adapted to address the individual needs of your patients through various channels. In addition, J&J withMe can help you and your care team address a wide range of access and reimbursement challenges that may arise.
Please see page 14 for more information.

To help you get started, we have broken the process down into 4 steps, each of which will be discussed on the following pages:

CONNECT ❯ COVERAGE ❯ COST SUPPORT ❯ CONTINUE CARE

Talk to patients about their insurance

Get details about coverage and out-of-pocket (OOP) costs

Discuss cost support and affordability resources

Identify ongoing support

PATIENTS CAN RECEIVE ERLEADA® VIA 2 OPTIONS

Specialty Pharmacy Provider (SPP)

— OR —

In-Office Dispensing Pharmacy (IODP)

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

STEP 1:
CONNECT

As with any prescription medication, the first step in helping a patient start and stay on ERLEADA® is to gather important details and information. For example, does the patient receive benefits through a spouse? Does the insurer have a preferred or mandated SPP?

Asking such questions up front is important because patients may not always understand the details of their coverage, and may receive benefits from a number of sources, including:

- Commercial health plans
- Government-sponsored health plans (eg, Medicare, Medicaid, TRICARE, Department of Veterans Affairs)
- Retiree benefits

TWO IMPORTANT REMINDERS:

- **ERLEADA® is covered under the prescription benefit**
- **Be sure to ask patients if they have more than one source of insurance coverage (eg, spousal and supplemental coverage)**

Specialty Pharmacy Provider (SPP)

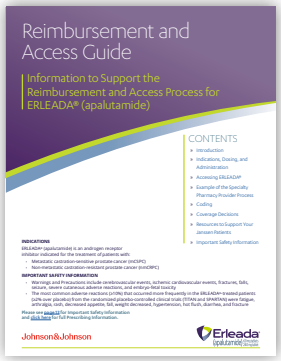
1. Office collects insurance information
2. Office forwards patient insurance information to SPP

In-Office Dispensing Pharmacy (IODP)[1]

1. Office collects insurance information
2. Office staff provides insurance information to the IODP

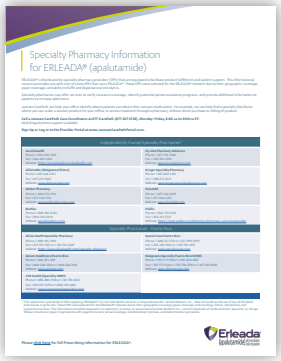
STEP 1:
CONNECT (continued)

RESOURCES



▸ Reimbursement and Access Guide

In this brochure you will find details about working with SPPs and Specialty Distributors (SDs), diagnosis codes for ERLEADA®, and other helpful information.



▸ Specialty Pharmacy Information for ERLEADA®

This resource contains contact information for SPPs and SDs currently authorized to distribute or sell ERLEADA®.

Resources shown are examples and are subject to change.

Erleada® (apalutamide) 60 mg tablets 240 mg tablet

STEP 2:
COVERAGE

After you have identified a patient's sources of insurance, the next step is to get the details about coverage and out-of-pocket (OOP) financial responsibilities. This process begins with a benefits investigation (BI), which can be handled by a Specialty Pharmacy Provider (SPP) within the ERLEADA® distribution network, your practice's In-Office Dispensing Pharmacy (IODP), or by J&J withMe. Once benefits have been verified, you can take the next steps toward helping a patient start and stay on ERLEADA®.

J&J withMe can help you with benefits investigation support, prior authorization support and status monitoring, information on reimbursement and the exceptions and appeals process, and prescription triage to SPPs.

Specialty Pharmacy Provider (SPP)

1. Healthcare provider (HCP) or J&J withMe submits prescription to SPP
2. SPP conducts benefits investigation (BI), verifies coverage, and determines patient OOP responsibility
3. SPP communicates PA requirements and other important information (eg, coverage and OOP responsibility) to HCP office
4. HCP completes PA paperwork and provides supporting documentation to SPP
5. SPP supports the PA process*

In-Office Dispensing Pharmacy (IODP)[1]

1. HCP sends prescription to IODP
2. IODP conducts BI, verifies coverage, and determines patient OOP responsibility
3. IODP initiates PA process

*SPP can also assist with exceptions requests and appeals (if necessary)

1. Egerton NJ. In-office dispensing of oral oncolytics: a continuity of care and cost mitigation model for cancer patients. *Am J Manag Care.* 2016;22(Suppl 4):S99-S103.

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

STEP 2:
COVERAGE (continued)

POTENTIAL CHALLENGES WITH PRIOR AUTHORIZATIONS (PAs)

PA denials may sometimes delay the time it takes for patients to access ERLEADA®, or even prevent patients from getting therapy. Common reasons for PA denials may include:

- Drug not on payer formulary
- Missing codes or documentation
- Desired use not consistent with payer coverage policy
- Medical necessity not established
- Step therapy requirements not met

Having your patient's complete medical history, specific diagnosis and diagnosis code, and rationale for treatment detailed in your request for coverage can help the approval process.

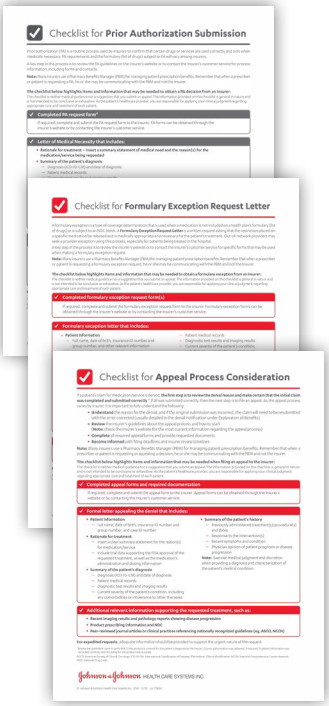
To assist your office with this process, we have created several checklists and resources for which links can be found on the next page. Download a Sample Letter of Medical Necessity and Sample Exception Letter for your office.

TIP: J&J withMe helps verify insurance coverage for your patients taking ERLEADA® and provides reimbursement information and status monitoring of PAs.

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

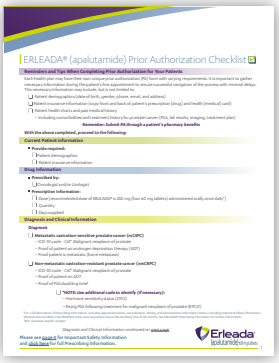
STEP 2:
COVERAGE (continued)

RESOURCES



- **Checklist for Prior Authorization Submission**
- **Checklist for Formulary Exception Request Letter**
- **Checklist for Appeal Process Consideration**

Use these checklists to keep track of best practices and documentation often required for PA submissions, exception requests, and appeals.



- **ERLEADA® Prior Authorization Checklist**

This guide will help users overcome challenges that potentially occur in completing a prior authorization specific to ERLEADA®.

Resources shown are examples and are subject to change.

Erleada® (apalutamide) 60 mg tablets 240 mg tablet

STEP 3:
COST SUPPORT

After your patient's prior authorization (PA) is approved, it will be time to discuss options for out-of-pocket (OOP) costs.

J&J withMe, the SPP network, or your practice's IODP may explore additional types of affordability support, depending on your patient's coverage.

Remember: It is helpful to discuss OOP costs with your patients. To do so, **consider using the checklist below as a guide**. You can also refer them to **J&J withMe** for assistance with affordability resources.

- ✓ **Patients with commercial insurance** may be eligible for the J&J withMe Savings Program (see next page)
- ✓ **Active military and retired veterans** may have additional VA or TRICARE benefits
- ✓ **Patients with Medicare or other government-sponsored coverage** *may* be eligible for a range of affordability support (see pages 11-13 for more details)
  - ✓ Medicare Part D Low-Income Subsidy (LIS), also known as "Extra Help"
  - ✓ State Pharmaceutical Assistance Programs (SPAPs)
  - ✓ Independent foundations*
  - ✓ The State Health Insurance Assistance Program (SHIP) for one-on-one counseling and support

*Independent co-pay assistance foundations have their own rules for eligibility, which are subject to change. We have no control over these independent foundations and can only refer your patients to a foundation that supports their disease state. We do not endorse any particular foundation.

Specialty Pharmacy Provider (SPP)

1. SPP identifies potential patient assistance programs as needed
2. Your office assists with patient application/enrollment

In-Office Dispensing Pharmacy (IODP)[1]

1. Your staff helps to identify potential patient assistance programs and assists with application/enrollment as needed

1. Egerton NJ. In-office dispensing of oral oncolytics: a continuity of care and cost mitigation model for cancer patients. *Am J Manag Care.* 2016;22(Suppl 4):S99-S103.

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

STEP 3:
COST SUPPORT (continued)

Once you have made the clinical decision to prescribe ERLEADA®, Johnson & Johnson has resources to help you support your patients.

J&J withMe

Support for patients using commercial or private insurance to pay for medicine

The **J&J withMe Savings Program** can help eligible patients receive instant savings on their out-of-pocket medicine costs for ERLEADA®. Depending on the patient's health insurance plan, savings may apply toward co-pay, co-insurance, or deductible. Your eligible patients will **pay $0 per month**. Maximum program benefit per calendar year shall apply. Not valid for patients using Medicare, Medicaid, or other government-funded programs to pay for their medicines. Terms expire at the end of each calendar year. Offer subject to change or end without notice. Restrictions, including monthly maximums, may apply. Patients may participate without sharing their income information. See program requirements at **ERLEADA.JNJwithMeSavings.com**

Online enrollment and tracking of patient Savings Program benefits for you, the pharmacy, and the patients

Provider Express at **Portal.JNJwithMe.com** allows you to check eligibility and enroll patients in the J&J withMe Savings Program with no Business Associate Agreement (BAA) required. You will not have a portal account, and you will not be able to view patients' Savings Program benefits until you create an account at **Portal.JNJwithMe.com**.

Providers can enroll and help manage patients' Savings Program benefits at **Portal.JNJwithMe.com**.

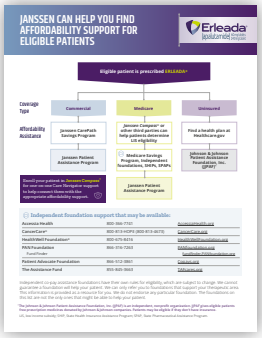
- Enroll your eligible, commercially insured patients in the J&J withMe Savings Program
- View or manage your patients' Savings Program benefits
- Receive notifications when new information is available for your account

By using the Provider Portal, you agree that you are receiving access to information about your patient's Savings Program account to assist in program administration as requested by the patient. You further agree that access to this information will not influence your clinical decisions.

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

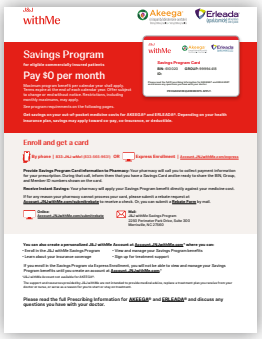
STEP 3:
COST SUPPORT (continued)

RESOURCES



▸ ERLEADA® Access Affordability Flashcard

This flashcard contains information about the support programs available to help patients start and stay on treatment.



▸ J&J withMe Savings Program

The brochure provides an overview of the J&J withMe Savings Program. It explains to patients how to obtain, activate, and use the savings card.

J&J withMe

▸ J&J withMe Personalized Support

At Johnson & Johnson, we are committed to helping people in their fight against cancer. Our J&J withMe program is here at every step to provide personalized support to help patients start and stay on their J&J medicines.

Resources shown are examples and are subject to change.

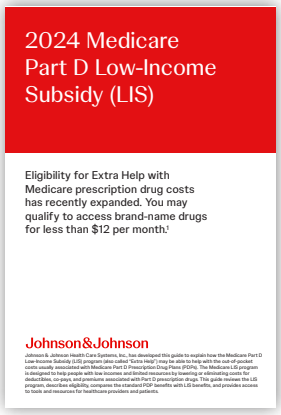
The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

STEP 3:
COST SUPPORT (continued)

RESOURCES (continued)

▸ Know Your State

This interactive tool provides a range of state-specific information on access and affordability options.



▸ Extra Help With Prescription Drug Costs

This brochure helps your Medicare Part D patients understand the Low-Income Subsidy (Extra Help) program. Through the program, eligible patients may be able to receive significant discounts on prescription medications.

▸ Health Insurance Open Enrollment Guide

Help your patients check their health insurance options for the next plan year.

Resources shown are examples and are subject to change.

STEP 4:
CONTINUE CARE

The ultimate goal is to ensure patients receive the medications they need so they can start and stay on treatment. After your office, J&J withMe, or an SPP partner identifies sources of support for patient out-of-pocket (OOP) costs as needed, the SPP will coordinate delivery to your patient or your patient can pick up ERLEADA® through the IODP. J&J withMe is available to help patients with access challenges related to refills and adherence.

PARTNER WITH YOUR PATIENTS AT EACH STEP

Make sure the office is regularly keeping in touch with patients. Advise patients in advance that a pharmacy may be contacting them to obtain and confirm personal information to help with insurance authorizations and drug delivery, and inform patients to contact the office if they have any questions before providing information to a third party. The more patients understand about the process of obtaining ERLEADA®, the more they can share responsibility for their treatment. For example, patients:

- **Must answer calls from an SPP or your office to coordinate payment and delivery**
- **Need to know the name and contact information for the SPP**
- **May need to take an active role in applying for affordability support programs**

PATIENT COMMUNICATION IS KEY TO ENCOURAGING ADHERENCE

Encourage patients to contact their HCP, SPP, and/or IODP if they experience any obstacles to adhering to ERLEADA® exactly as prescribed (eg, difficulty with OOP costs or side effects). Patients will receive several important calls:

- **SPP or IODP will remind them to refill their prescription**
- **SPP or IODP will confirm refill and delivery or pick-up**

Specialty Pharmacy Provider (SPP)

1. Once patient OOP costs are paid, SPP coordinates shipment of ERLEADA®
2. SPP provides medication adherence support

In-Office Dispensing Pharmacy (IODP)[1]

1. Once patient OOP costs are paid, patient picks up ERLEADA® from IODP

1. Egerton NJ. In-office dispensing of oral oncolytics: a continuity of care and cost mitigation model for cancer patients. *Am J Manag Care*. 2016;22(Suppl 4):S99-S103.

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

J&J withMe
PATIENT SUPPORT

Once you have made the clinical decision to prescribe ERLEADA®, Johnson & Johnson has resources to help you support your patients.

J&J withMe is your single source for access, affordability, and treatment support programs from Johnson & Johnson. Your patients will be connected to ERLEADA withMe.

- **Access Support to Help Navigate Payer Processes**
  - J&J withMe helps verify insurance coverage for your patients taking ERLEADA®, providing benefits investigation support, prior authorization support, information on the exceptions and appeals process, and reimbursement information.
- **Affordability Resources for Your Patients**
  - Help patients discover ways to afford their ERLEADA® — regardless of their insurance type or even if they have no insurance at all
- **Personalized, free 1-on-1 support for your patients throughout their treatment journey**
  - Each patient's treatment journey is unique. We're here to help by providing personalized 1-on-1 support from oncology trained nurses*

*Care Navigators do not provide medical advice.

- Visit **Portal.JNJwithMe.com** to investigate insurance coverage for your patients, enroll your patients in savings, or sign them up for Care Navigator support.
- Visit **JNJwithMe.com/hcp/** for access and affordability information for the J&J medicine you prescribed
- Bookmark these links for quick and easy access!
- Questions? Call 833-JNJ-wMe1 (833-565-9631), Monday through Friday, 8:00 AM to 8:00 PM ET

The patient support and resources provided by J&J withMe are not intended to provide medical advice, replace a treatment plan from the patient's doctor or nurse, provide case management services, or serve as a reason to prescribe ERLEADA®.

INDICATIONS

ERLEADA® (apalutamide) is an androgen receptor inhibitor indicated for the treatment of patients with:

- Metastatic castration-sensitive prostate cancer (mCSPC)
- Non-metastatic castration-resistant prostate cancer (nmCRPC)

IMPORTANT SAFETY INFORMATION

WARNINGS AND PRECAUTIONS

Cerebrovascular and Ischemic Cardiovascular Events — In a randomized study (SPARTAN) of patients with nmCRPC, ischemic cardiovascular events occurred in 3.7% of patients treated with ERLEADA® and 2% of patients treated with placebo. In a randomized study (TITAN) in patients with mCSPC, ischemic cardiovascular events occurred in 4.4% of patients treated with ERLEADA® and 1.5% of patients treated with placebo. Across the SPARTAN and TITAN studies, 4 patients (0.3%) treated with ERLEADA® and 2 patients (0.2%) treated with placebo died from an ischemic cardiovascular event. Patients with history of unstable angina, myocardial infarction, congestive heart failure, stroke, or transient ischemic attack within 6 months of randomization were excluded from the SPARTAN and TITAN studies.

In the SPARTAN study, cerebrovascular events occurred in 2.5% of patients treated with ERLEADA® and 1% of patients treated with placebo. In the TITAN study, cerebrovascular events occurred in 1.9% of patients treated with ERLEADA® and 2.1% of patients treated with placebo. Across the SPARTAN and TITAN studies, 3 patients (0.2%) treated with ERLEADA® and 2 patients (0.2%) treated with placebo died from a cerebrovascular event.

Cerebrovascular and ischemic cardiovascular events, including events leading to death, occurred in patients receiving ERLEADA®. Monitor for signs and symptoms of ischemic heart disease and cerebrovascular disorders. Optimize management of cardiovascular risk factors, such as hypertension, diabetes, or dyslipidemia. Consider discontinuation of ERLEADA® for Grade 3 and 4 events.

Fractures — In a randomized study (SPARTAN) of patients with nmCRPC, fractures occurred in 12% of patients treated with ERLEADA® and in 7% of patients treated with placebo. In a randomized study (TITAN) of patients with mCSPC, fractures occurred in 9% of patients treated with ERLEADA® and in 6% of patients treated with placebo. Evaluate patients for fracture risk. Monitor and manage patients at risk for fractures according to established treatment guidelines and consider use of bone-targeted agents.

Falls — In a randomized study (SPARTAN), falls occurred in 16% of patients treated with ERLEADA® compared with 9% of patients treated with placebo. Falls were not associated with loss of consciousness or seizure. Falls occurred in patients receiving ERLEADA® with increased frequency in the elderly. Evaluate patients for fall risk.

Seizure — In 2 randomized studies (SPARTAN and TITAN), 5 patients (0.4%) treated with ERLEADA® and 1 patient treated with placebo (0.1%) experienced a seizure. Permanently discontinue ERLEADA® in patients who develop a seizure during treatment. It is unknown whether anti-epileptic medications will prevent seizures with ERLEADA®. Advise patients of the risk of developing a seizure while receiving ERLEADA® and of engaging in any activity where sudden loss of consciousness could cause harm to themselves or others.

Severe Cutaneous Adverse Reactions — Fatal and life-threatening cases of severe cutaneous adverse reactions (SCARs), including Stevens-Johnson syndrome/toxic epidermal necrolysis (SJS/TEN), and drug reaction with eosinophilia and systemic symptoms (DRESS) occurred in patients receiving ERLEADA®.

Monitor patients for the development of SCARs. Advise patients of the signs and symptoms of SCARs (eg, a prodrome of fever, flu-like symptoms, mucosal lesions, progressive skin rash, or lymphadenopathy). If a SCAR is suspected, interrupt ERLEADA® until the etiology of the reaction has been determined. Consultation with a dermatologist is recommended. If a SCAR is confirmed, or for other Grade 4 skin reactions, permanently discontinue ERLEADA® *[see Dosage and Administration (2.2)].*

Interstitial Lung Disease (ILD)/Pneumonitis — Fatal and life-threatening interstitial lung disease (ILD) or pneumonitis can occur in patients treated with ERLEADA®.

Post-marketing cases of ILD/pneumonitis, including fatal cases, occurred in patients treated with ERLEADA®. Across clinical trials (TITAN and SPARTAN, n=1327), 0.8% of patients treated with ERLEADA® experienced ILD/pneumonitis, including 0.2% who experienced Grade 3 events *[see Adverse Reactions (6.1, 6.2)].*

(continued on next page)

IMPORTANT SAFETY INFORMATION (CONTINUED)

WARNINGS AND PRECAUTIONS (CONTINUED)

Monitor patients for new or worsening symptoms indicative of ILD/pneumonitis (eg, dyspnea, cough, fever). Immediately withhold ERLEADA® if ILD/pneumonitis is suspected. Permanently discontinue ERLEADA® in patients with severe ILD/pneumonitis or if no other potential causes of ILD/pneumonitis are identified *[see Dosage and Administration (2.2)]*.

Embryo-Fetal Toxicity — The safety and efficacy of ERLEADA® have not been established in females. Based on findings from animals and its mechanism of action, ERLEADA® can cause fetal harm and loss of pregnancy when administered to a pregnant female. Advise males with female partners of reproductive potential to use effective contraception during treatment and for 3 months after the last dose of ERLEADA® *[see Use in Specific Populations (8.1, 8.3)]*.

ADVERSE REACTIONS

The most common adverse reactions (≥10%) that occurred more frequently in the ERLEADA®-treated patients (≥2% over placebo) from the randomized placebo-controlled clinical trials (TITAN and SPARTAN) were fatigue, arthralgia, rash, decreased appetite, fall, weight decreased, hypertension, hot flush, diarrhea, and fracture.

Laboratory Abnormalities — All Grades (Grade 3-4)

- **Hematology —** In the TITAN study: white blood cell decreased ERLEADA® 27% (0.4%), placebo 19% (0.6%). In the SPARTAN study: anemia ERLEADA® 70% (0.4%), placebo 64% (0.5%); leukopenia ERLEADA® 47% (0.3%), placebo 29% (0%); lymphopenia ERLEADA® 41% (1.8%), placebo 21% (1.6%)

- **Chemistry —** In the TITAN study: hypertriglyceridemia ERLEADA® 17% (2.5%), placebo 12% (2.3%). In the SPARTAN study: hypercholesterolemia ERLEADA® 76% (0.1%), placebo 46% (0%); hyperglycemia ERLEADA® 70% (2%), placebo 59% (1.0%); hypertriglyceridemia ERLEADA® 67% (1.6%), placebo 49% (0.8%); hyperkalemia ERLEADA® 32% (1.9%), placebo 22% (0.5%)

Rash — In 2 randomized studies (SPARTAN and TITAN), rash was most commonly described as macular or maculopapular. Adverse reactions of rash were 26% with ERLEADA® vs 8% with placebo. Grade 3 rashes (defined as covering >30% body surface area [BSA]) were reported with ERLEADA® treatment (6%) vs placebo (0.5%).

The onset of rash occurred at a median of 83 days. Rash resolved in 78% of patients within a median of 78 days from onset of rash. Rash was commonly managed with oral antihistamines and topical corticosteroids, and 19% of patients received systemic corticosteroids. Dose reduction or dose interruption occurred in 14% and 28% of patients, respectively. Of the patients who had dose interruption, 59% experienced recurrence of rash upon reintroduction of ERLEADA®.

Hypothyroidism — In 2 randomized studies (SPARTAN and TITAN), hypothyroidism was reported for 8% of patients treated with ERLEADA® and 1.5% of patients treated with placebo based on assessments of thyroid-stimulating hormone (TSH) every 4 months. Elevated TSH occurred in 25% of patients treated with ERLEADA® and 7% of patients treated with placebo. The median onset was at the first scheduled assessment. There were no Grade 3 or 4 adverse reactions. Thyroid replacement therapy, when clinically indicated, should be initiated or dose adjusted.

DRUG INTERACTIONS

Effect of Other Drugs on ERLEADA® — Co-administration of a strong CYP2C8 or CYP3A4 inhibitor is predicted to increase the steady-state exposure of the active moieties. No initial dose adjustment is necessary; however, reduce the ERLEADA® dose based on tolerability *[see Dosage and Administration (2.2)]*.

Effect of ERLEADA® on Other Drugs

CYP3A4, CYP2C9, CYP2C19, and UGT Substrates — ERLEADA® is a strong inducer of CYP3A4 and CYP2C19, and a weak inducer of CYP2C9 in humans. Concomitant use of ERLEADA® with medications that are primarily metabolized by CYP3A4, CYP2C19, or CYP2C9 can result in lower exposure to these medications. Substitution for these medications is recommended when possible or evaluate for loss of activity if medication is continued. Concomitant administration of ERLEADA® with medications that are substrates of UDP-glucuronosyl transferase (UGT) can result in decreased exposure. Use caution if substrates of UGT must be co-administered with ERLEADA® and evaluate for loss of activity.

(continued on next page)

IMPORTANT SAFETY INFORMATION (CONTINUED)

DRUG INTERACTIONS (CONTINUED)

P-gp, BCRP, or OATP1B1 Substrates — Apalutamide is a weak inducer of P-glycoprotein (P-gp), breast cancer resistance protein (BCRP), and organic anion transporting polypeptide 1B1 (OATP1B1) clinically. Concomitant use of ERLEADA® with medications that are substrates of P-gp, BCRP, or OATP1B1 can result in lower exposure of these medications. Use caution if substrates of P-gp, BCRP, or OATP1B1 must be co-administered with ERLEADA® and evaluate for loss of activity if medication is continued.

Please see full Prescribing Information for ERLEADA®.
